# Simple, powerful, and affordable monitoring software IT pros love

IT monitoring built on the Orion Platform

One vendor. One platform. One pane of glass. The Orion® Platform is a modular, scalable monitoring platform for end-to-end visibility into and control of the health and performance of on-premises, hosted, and cloud infrastructure and applications.

NETWORK AUTOMATION MANAGER

Unified network automation and operations management software

- Advanced network monitoring and troubleshooting
- Traffic, bandwidth, and WAN monitoring
- Change and configuration management
- High availability

solarwinds.com/NAM

NETWORK PERFORMANCE MONITOR

Multi-vendor monitoring that scales and expands with the needs of your network

- Comprehensive network fault monitoring and performance management
- Availability, real-time, and historical statistics from SNMP-, API-, or WMI-enabled devices
- Advanced network troubleshooting for on-premises, hybrid, and cloud services

solarwinds.com/NPM

NETFLOW TRAFFIC ANALYZER

View network traffic to understand utilization ensuring your network traffic

- Easy to view dashboard gives visibility into spikes, dips, or absence of flow data
- Bandwidth use by user, application, protocol, and IP address group
- Analyze traffic patterns over months, days, or minutes by drilling down into any network element

solarwinds.com/NTA

NETWORK CONFIGURATION MANAGER

Automate network configuration management, which can help save time and optimize IT resources

- Enables automated bulk deployment of standardized device configs
- Set up automatic backups of device configurations, and rollback to the last-known good configurations
- Easily establish multi-device baselines to identify and resolve configuration drift
- Cisco® device vulnerability scanning and identification

solarwinds.com/NCM

IP ADDRESS MANAGER

Easy-to-use IP address management software

- Automated IP address tracking, alerting, and reporting
- Integrated DHCP, DNS, and IP address management
- IP detail and history tracking

solarwinds.com/IPAM,

LOG ANALYZER

Easily investigate machine data to help identify the root cause of IT issues faster

- Powerfully designed and intuitive log aggregation, tagging, filtering, and alerting for effective troubleshooting
- Fully integrated with Orion Platform products, enabling a unified view of IT infrastructure monitoring and associated logs

solarwinds.com/LA

SERVER & APPLICATION MONITOR

Manage, troubleshoot, and resolve app and infrastructure performance issues

- Visibility into applications, OSes, and infrastructure on-prem as well as in the cloud
- Support for over 1,200 applications, including AD, Exchange™, SQL Server®, and more
- Extend monitoring with custom monitoring for any service, process, or application

solarwinds.com/SAM

DATABASE PERFORMANCE ANALYZER

24/7 real-time and historic database monitoring across major database platforms on-prem or in the cloud

- Easy, intuitive, wait-based root cause analysis of issues at the DB and query level
- Proactively optimize inefficient workload using Table Tuning Advisors
- Machine learning powered anomaly detection to know when things deviate from expected

solarwinds.com/DPA

VIRTUALIZATION MANAGER

Performance, troubleshooting, capacity, and sprawl management from VM to datastore

- Deep visibility into usage and performance of VMs, hosts, clusters, and datastores
- Enhanced actionable intelligence allows for single-click, multiple-step remediation of active and predicted VM performance and resource allocation
- Extend monitoring into the cloud with Azure® and AWS IaaS

solarwinds.com/VMAN

STORAGE RESOURCE MONITOR

Multi-vendor storage capacity and performance monitoring, alerting, and reporting

- Designed to provide real-time and historic performance visibility at multiple levels(array, storage pools, LUNs, RAID groups, and more)
- Automated storage capacity planning across the fleet to help highlight hot spots during peak hours
- Identify systemic LUN contention and other at-risk entities in your storage environment

solarwinds.com/SRM

WEB PERFORMANCE MONITOR

Measure user experience and troubleshoot latency issues for web applications

- Visibility into end-user experience for web and SaaS application transactions
- Monitor performance for applications behind the firewall from multiple geographic locations
- Built-in integration with the Orion Platform can show infrastructure dependencies to help with faster troubleshooting

solarwinds.com/WPM

SERVER CONFIGURATION MONITOR

Know when server configurations change, and who made them

- Detect and alert changes to server hardware, software, files, registry, script outputs, and more
- Asses changes against custom baselines and over time
- Correlate performance incidents against configuration changes

solarwinds.com/SCM

SolarWinds MSP Products

The SolarWinds® MSP software-as-a-service (SaaS) platform is designed to provide IT service providers the tools they need to help them expand their service offerings, win new business, and keep current customers

MSP REMOTE MONITORING AND MANAGEMENT
Manage, patch, and troubleshoot servers and endpoints across multiple locations efficiently

MSP MANAGER™
Intuitive ticketing, billing, and reporting solution

MAIL ASSURE™
Spam and malware protection plus email archiving

TAKE CONTROL
Remote access for quick troubleshooting

Cloud Management Products

Curated portfolio of SaaS-based monitoring products for cloud-first applications and DevOps-oriented teams

PINGDOM®
Website performance monitoring trusted by over 850,000 users

PINGDOM SERVER MONITOR
SaaS-based server monitoring developed by DevOps professionals, for DevOps professionals

PAPERTRAIL™
Cloud-hosted log management to help troubleshoot issues in your infrastructure and apps; get started typically in minutes

APPOPTICS™
Seamless application and infrastructure monitoring; comprehensive visibility can provide faster application-centric troubleshooting

LOGGLY®
Cloud-hosted log monitoring and log analytics

SolarWinds Tools

WEB HELP DESK®
Affordable help desk ticketing and asset management

DAMEWARE® REMOTE SUPPORT
Remote control and systems management tools

ENGINEER'S TOOLSET
Sixty must-have network troubleshooting and diagnostic tools

KIWI SYSLOG® SERVER
Centralized log management for network devices and servers

NETWORK TOPOLOGY MAPPER
Automatically plot your network, typically in minutes

MOBILE ADMIN®
Simplify IT administration and management from mobile devices

SERV-U® MANAGED FILE TRANSFER
Safe file transfers inside and outside your organization

SolarWinds Security Products

LOG & EVENT MANAGER
ACCESS RIGHTS MANAGER
BACKUP
RISK INTELLIGENCE
SERV-U
PATCH MANAGER
NETWORK CONFIGURATION MANAGER
THREAT MONITOR™
SERVER CONFIGURATION MONITOR

solarwinds®
